

Project Design Phase

Problem – Solution Fit Template

Date	30 September 2026
Team ID	SWTID-2026-9644
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The project addresses inconsistent and incomplete data entry in Incident records. The proposed ServiceNow solution uses UI Policies and Client Scripts to enforce conditional field behavior, auto-populate values, and validate data at the form level before an Incident is submitted.

Purpose:

- Enforce consistent and accurate data entry on Incident records.
- Make fields mandatory, visible, or read-only dynamically based on conditions.
- Auto-populate values to reduce manual effort and data entry errors.
- Prevent submission of incomplete or invalid Incidents using save-time validation.
- Improve triage, routing, SLA compliance, and reporting accuracy.

Template:

1. CUSTOMER SEGMENTS (CS) Primary: Callers and service desk agents who create or update Incidents. Secondary: Incident managers, resolver groups, ServiceNow administrators and reporting teams.	6. CUSTOMER CONSTRAINTS (CC) Existing incident process and business rules, required fields by category/priority, form and ACL limits, minimal performance impact, and client-side rules that can be bypassed by imports/APIs.	5. AVAILABLE SOLUTIONS (AS) User awareness, training, manual checks, server-side rules only, and post-submission clean-up of incorrect records. These lead to inconsistent data and rework.
2. JOBS-TO-BE-DONE / PROBLEMS (JP) Agents need to log Incidents quickly and correctly. Managers need complete, consistent data for triage, routing and SLA tracking.	9. PROBLEM ROOT CAUSE (RC) Data entry depends on user awareness and manual checks, with no real-time enforcement on the form, so incomplete or incorrect values get submitted.	7. BEHAVIOUR (BE) Users fill only the obvious fields, submit, and are later asked for missing details. Agents manually correct records and re-route Incidents.
3. TRIGGERS (TR) New Incident creation, change of State/Category/Priority, putting an Incident on hold, or resolving/closing an Incident that needs close notes.	10. YOUR SOLUTION (SL) ServiceNow UI Policies and Client Scripts (onLoad, onChange, onSubmit) on the Incident form to set mandatory/visible/read-only fields, auto-populate values, and block submission with clear messages when rules are not met.	8. CHANNELS OF BEHAVIOUR (CH) ServiceNow Incident form (Platform UI / Workspace), Service Desk and list views, on-form error/info messages, and reports/dashboards.
4. EMOTIONS: BEFORE / AFTER (EM) Before: frustration, rework and unclear expectations. After: guided entry, confidence, fewer corrections and clean data.
