Empathize & Discover

Team ID SWTID-2026-9644

Project Name Implement Client Script & UI Policy (Incident)

Designer ServiceNow

Team Members Vairavakarumari A (Team Leader), Abinaya K, Kayathri Devi B

Empathy Map Canvas

User Persona: Employees / IT support staff who create, triage, route, and resolve Incident records in ServiceNow.

SAYS

- Incident details should be complete and accurate.
- Required fields should be clearly identified.
- The form should prevent invalid submissions.

THINKS

- Manual checking may cause delays and errors.
- Conditional rules can make Incident entry easier.
- Automation and validation can improve data quality.

DOES

- Creates and updates Incident records.
- Enters required information and submits the record.
- Corrects missing or invalid details when prompted.

FEELS

- Frustrated by incomplete or rejected records.
- Concerned when required information is unclear.
- Satisfied when the form guides accurate data entry.

PAINS

- Incomplete or inconsistent Incident data.
- Repetitive manual checking and correction.
- Incorrect routing or triage caused by missing details.
- Risk to reporting accuracy and SLA compliance.

GAINS

- Consistent and accurate Incident records.
- Dynamic mandatory fields and visibility.
- Auto-populated values where required.
- Save-time validation and improved data quality.

Goal: Understand the user's needs, frustrations, and expectations so Incident records can be managed consistently using Client Scripts and UI Policies, improving data integrity, validation, and overall service quality.
